### **Known Limitations**

Currently, chapter 5 Dependencies to other modules does not describe the versions of dependent modules. Thus, a version check will extend the chapter.

### 1 Introduction and functional overview

This specification specifies the functionality, API and the configuration of the AUTOSAR Basic Software module Ethernet Driver.

In the AUTOSAR Layered Software Architecture, the Ethernet Driver belongs to the *Microcontroller Abstraction Layer*, or more precisely, to the *Communication Drivers*.

This indicates the main task of the Ethernet Driver:

Provide to the upper layer (Ethernet Interface) a hardware independent interface comprising multiple equal controllers. This interface shall be uniform for all controllers. Thus, the upper layer (Ethernet Interface) may access the underlying bus system in a uniform manner. The interface provides functionality for initialization, configuration and data transmission. The configuration of the Ethernet Driver however is bus specific, since it takes into account the specific features of the communication controller.

A single Ethernet Driver module supports only one type of controller hardware, but several controllers of the same type. Additionally, the Ethernet Driver has to be able to be interoperable with the Switch Driver, if it is in a managed mode. In this case, a special treatment of the Ethernet frame might be necessary to fit a specific interpretation by a Switch device afterwards. The Ethernet Driver's prefix requires a unique namespace. The Ethernet Interface can access different controller types using different Ethernet Drivers using this prefix. The decision which driver to use to access a particular controller is a configuration parameter of the Ethernet Interface.

Figure 1.1 depicts the lower part of the Ethernet stack. One Ethernet Interface accesses several controllers using one or several Ethernet Drivers.

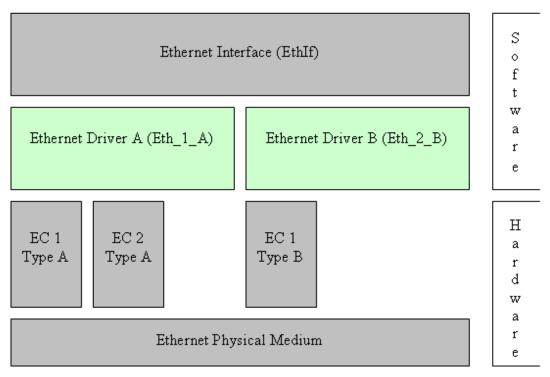

Figure 1.1: Ethernet stack module overview

Note: The Ethernet Driver is specified in a way that allows for object code delivery of the code module, following the "one-fits-all" principle, i.e. the entire configuration of the Ethernet Interface can be carried out without modifying any source code. Thus, the configuration of the Ethernet Driver can be carried out largely without detailed knowledge of the Ethernet Driver software.

# 2 Acronyms and abbreviations

# 3.3 Related specification

AUTOSAR provides a General Specification on Basic Software modules [19] (SWS BSW General), which is also valid for Ethernet Driver.

Thus, the specification SWS BSW General shall be considered as additional and required specification for Ethernet Driver.

# 4 Constraints and assumptions

### 4.1 Limitations

The Ethernet Driver module is only able to handle a single thread of execution. The execution must not be pre-empted by itself.

It is not possible to transmit data which exceeds the available buffer size of the used controller. Longer data has to be transmitted using the Internet Protocol (IP) or Transmission Control Protocol (TCP).

Depending on the Ethernet hardware, it may become necessary that implementations deviate from API specifications in respect to the asynchronous/synchronous behaviour.

# 4.2 Applicability to car domains

The Ethernet BSW stack is intended to be used wherever high data rates are required but no hard real-time is required. Of course, it can also be used for less-demanding use cases, i.e. for low data rates.

# 5 Dependencies to other modules

This chapter lists the modules interacting with the Ethernet Driver module.

Modules that use Ethernet Driver module:

- Ethernet Interface (EthIf)
- Ethernet Transceiver Driver (EthTrcv)

Modules used by the Ethernet Driver module:

BSW Scheduler mechanisms for data consistency and main function handling.

Dependencies to other Modules:

 On certain systems the controller might share resources with other components (e.g. the MCU, Port), and may depend on their configuration. If those resources are within scope of the other modules (e.g. PLL configuration, memory mapping, etc.) the Ethernet Driver module does not take care of configuring those components but requires their preceding initialization.

# 6 Requirements traceability

Requirement	Description	Satisfied by
SRS_BSW_00101	The Basic Software Module shall be able to initialize variables and hardware in a separate initialization function	SWS_Eth_00248, SWS_Eth_00252
SRS_BSW_00323	All AUTOSAR Basic Software Modules shall check passed API parameters for validity	SWS_Eth_00249, SWS_Eth_00250, SWS_Eth_00253, SWS_Eth_00254
SRS_BSW_00369	All AUTOSAR Basic Software Modules shall not return specific development error codes via the API	SWS_Eth_00249, SWS_Eth_00250, SWS_Eth_00253, SWS_Eth_00254
SRS_BSW_00416	The sequence of modules to be initialized shall be configurable	SWS_Eth_00248, SWS_Eth_00252
SRS_Eth_00053	SWS shall specify configuration	SWS_Eth_00251, SWS_Eth_00255
SRS_ETH_00086	-	SWS_Eth_91001
SRS_Eth_00127	The Ethernet Driver shall provide statistic counter values	SWS_Eth_00026, SWS_Eth_00226, SWS_Eth_00233, SWS_Eth_91002, SWS_Eth_91003, SWS_Eth_91004, SWS_Eth_91005, SWS_Eth_91006
SRS_Eth_00146	The Ethernet Driver shall provide 10BASE-T1S support	SWS_Eth_00263, SWS_Eth_00264, SWS_Eth_00265, SWS_Eth_00266, SWS_Eth_00267, SWS_Eth_00268, SWS_Eth_00269, SWS_Eth_00270, SWS_Eth_00271, SWS_Eth_00272
SRS_Eth_00148	The Ethernet Driver shall support MII	SWS_Eth_00241, SWS_Eth_00273, SWS_Eth_00274, SWS_Eth_00278, SWS_Eth_00279

# 7 Functional specification

### 7.1 Ethernet BSW stack

As part of the AUTOSAR Layered Software Architecture according to Figure 7.1, the Ethernet BSW modules also form a layered software stack. Figure 7.1 depicts the basic structure of this Ethernet BSW stack. The Ethernet Interface module accesses several controllers using the Ethernet Driver layer, which can be made up of several Ethernet Drivers modules.

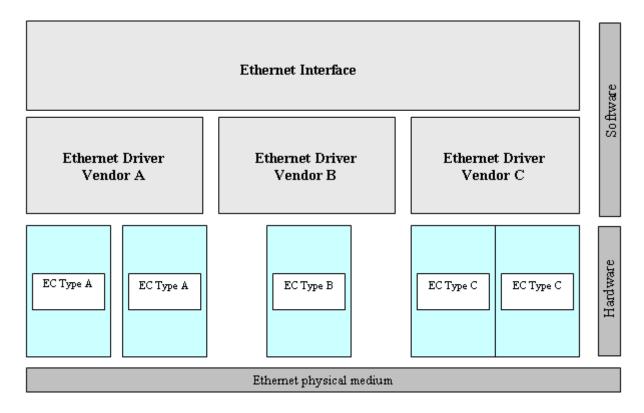

Figure 7.1: Basic Structure of the Ethernet BSW stack

Furthermore a Switch device might be connected to a dedicated controller index of an Ethernet Driver. This scenario leads to additional interaction between the Switch Driver and the Ethernet Driver [Figure 7.2]. The Ethernet Driver ask the Switch Driver for a special treatment to ensure that the current Ethernet frame could be managed in the Switch later on.

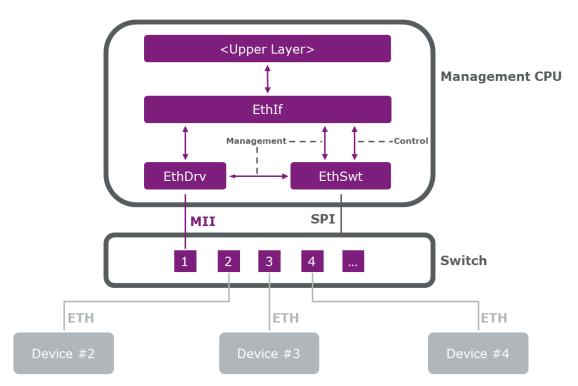

Figure 7.2: HW/SW basic structure including Switch device

# 7.1.1 Indexing scheme

Users of the Ethernet Driver identify controller resources using an indexing scheme as depicted in Figure 7.3.

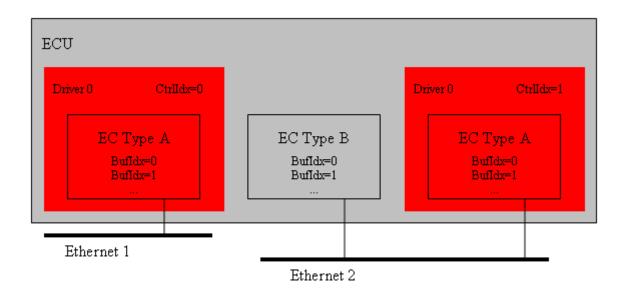

Figure 7.3: Ethernet Driver indexing scheme

[SWS\_Eth\_00003] [

The Ethernet Driver is using a zero-based index to abstract the access for upper software layers. The parameter Eth\_Ctrlldx within configuration corresponds to parameter Ctrlldx used in the API. I()

### [SWS\_Eth\_00004] [

A buffer index (Bufldx) indentifies an Ethernet buffer processed by Ethernet Driver API functions. Each controller's buffers are identified by buffer indexes 0 to (n-1) where n is the number of buffers processed by the corresponding controller. Buffer indexes are valid within a tuple <Ctrlldx, Bufldx> only. A Bufldx uniquely identifies the buffer used for an Ethernet Driver. |()

#### 7.1.2 Requirements

This chapter lists requirements that shall be fulfilled by Ethernet Driver module implementations.

The Ethernet Driver module environment comprises all modules which are calling interfaces of the Ethernet Driver module.

#### [SWS\_Eth\_00005] [

The Ethernet Driver module shall support pre-compile time, link time and post-build time configuration. |()

### [SWS\_Eth\_00006] [

The header file *Eth.h* shall include a software and specification version number. (()

#### [SWS Eth 00007] [

The Ethernet Driver module shall perform a consistency check between code files and header files based on pre-process-checking the version numbers of related code files and header files. |()

#### [SWS Eth 00008] [

In case development error detection is enabled for the Ethernet Driver module: The Ethernet Driver module shall check API parameters for validity and report detected errors to the DET. |()

DET API functions are specified in [16].

#### [SWS Eth 00011] [

None of the Ethernet Driver module header files shall define global variables. (1)

#### [SWS\_Eth\_00218] [

The Ethernet Driver shall ensure that the base addresses of all reception and transmission buffers fulfill the memory alignment requirements for all AUTOSAR data types of the respective platform. I()

#### [SWS Eth 00216] [

For transmissions the Ethernet Controller shall enable hardware capabilities for the calculation of protocol checksums (offloading) according to the following list:

- a) for IPv4 frames if EthCtrlEnableOffloadChecksumIPv4 is set to TRUE
- b) for ICMP frames if EthCtrlEnableOffloadChecksumICMP is set to TRUE
- c) for TCP frames if EthCtrlEnableOffloadChecksumTCP is set to TRUE
- d) for UDP frames if EthCtrlEnableOffloadChecksumUDP is set to TRUE.

In all other cases, the Ethernet Controller shall not manipulate the checksum fields. <u>J()</u>

### [SWS\_Eth\_00217] [

For reception the Ethernet Controller shall enable hardware capabilities to discard frames with mismatching protocol checksums (offloading) according to the following list:

- a) for IPv4 frames if EthCtrlEnableOffloadChecksumIPv4 is set to TRUE
- b) for ICMP frames if EthCtrlEnableOffloadChecksumICMP is set to TRUE
- c) for TCP frames if EthCtrlEnableOffloadChecksumTCP is set to TRUE
- d) for UDP frames if EthCtrlEnableOffloadChecksumUDP is set to TRUE. In all other cases, the Ethernet Controller shall not consider the protocol checksum fields. ]()

#### [SWS Eth 00176] [

The Global Time interfaces shall be used to access the time synchronization functionalities (see document [23]). |()

### [SWS\_Eth\_00243] [

Ethernet SW Driver shall call EthIf\_TxConfirmation with Result set to E\_OK to indicate a successful transmission; either from the Interrupt routine (in interrupt mode) or from the Eth\_TxConfirmation routine in polling mode (if the notification has been enabled). | ()

#### [SWS Eth 00256][

Ethernet SW Driver shall call EthIf\_TxConfirmation with Result set to E\_NOT\_OK if the transmission failed. |()

The call to EthIf\_TxConfirmation with Result set to E\_NOT\_OK shall allow the upper layer to implement a simple locking scheme. It can rely on the fact that every time Eth Transmit is called, EthIf TxConfirmation will be called afterwards.

#### [SWS Eth 00244] [

Ethernet SW Driver shall call EthIf\_RxIndication to indicate a successful reception either from the Interrupt routine (in interrupt mode) or from the Eth\_Receive routine in polling mode (please refer to SWC\_ETH\_0096) J()

#### [SWS Eth 00247][

The Switch Driver management API's:

EthSwt\_EthRxProcessFrame(), EthSwt\_EthRxFinishedIndication(), EthSwt\_EthTxPrepareFrame(), EthSwt\_EthTxAdaptBufferLength(),

EthSwt\_EthTxProcessFrame() and EthSwt\_EthTxFinishedIndication()

shall be used to to inform the Switch Driver about a required special treatment for Switch management purpose (see document AUTOSAR\_SWS\_EthernetInterface). I()

# 7.1.3 Buffer handling

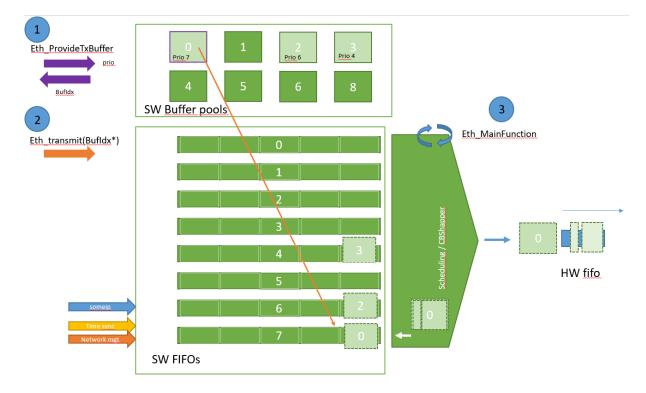

It is possible to use an optional software buffer handling mechanism. Buffer handling by Software is needed in case no Hardware feature is available that ensures a fair traffic scheduling and which avoids uncontrolled postponement of messages due to (too) strict priority handling.

The optional SW buffer handling is based on the so-called Credit Based Shapper algorithm (CBS) and which works by distributing messages into dedicated SW FIFOs based on their priority.

The CBS algorithm uses credits given in Bytes in order to ensure a fair distribution of transmission chances among the different SW FIFOs.

The SW buffer (SW Buffer Pools) and physical memory on PHY level (HW FIFO) used normally are expanded with the CBS on basis of so-called SW FIFOs, where messages are copied to, once Eth\_Transmit() is called and sorted depending on their priority.

The CBS, its elements and the different API calls involved are depicted in the following graphic:

[SWS\_Eth\_00263] {DRAFT} [

If the configuration parameter EthCtrlConfigSwBufferHandling is set to TRUE, then the optional SW buffer handling shall be enabled. [(SRS\_Eth\_00146)

**Note**: If buffer handling is supported by hardware, it is recommended to deactivate the software buffer handling by setting EthCtrlConfigSwBufferHandling to FALSE.

[SWS\_Eth\_00264] {DRAFT} [

If the config parameter EthCtrlConfigSwBufferHandling is set to TRUE, each SW FIFO size shall be configured using a multiple of the parameter EthCtrlConfigEgressFifoBufLenByte.

J(SRS\_Eth\_00146)

**Note**: the SW FIFO configuration is done via the container EthCtrlConfigEgressFifo.

[SWS\_Eth\_00265] {DRAFT} [

All SW FIFOs shall follow the criteria listed here:

- Each SW FIFO shall be reserved for a specific priority.
- The SW FIFOs shall be filled and read out according to FIFO principles.
- Each SW FIFO shall have identical settings except for EthCtrlConfigShaperIdleSlope and EthCtrlConfigEgressFifoBufLenByte.

(SRS\_Eth\_00146)

<u>Note</u>: Regarding last bulletin point, the reason to use different settings of EthCtrlConfigShaperIdleSlope and EthCtrlConfigEgressFifoBufLenByte per SW FIFO is, to avoid unnecessary delay of sending frames which reside in the lower priority SW FIFOs by configuring a slower recovery of credits for the higher priority SW FIFOs.

[SWS Eth 00266] {DRAFT} [

SW FIFOs shall be iterated and their credits account be updated in the following way and order:

- Iterate through all SW FIFOs, starting at the highest priority SW FIFO and descending, and add the amount of credits accumulated since the last Eth\_MainFunction() call. The amount of credits accumulated is given by EthCtrlConfigShaperIdleSlope.
- Credits are only accumulated for SW FIFOs which have at least one message queued inside them. Empty SW FIFOs do not accumulate credits.
- If a SW FIFO is empty but has still credits left from previous iterations, these credits shall neither be deleted nor increased.
- If a SW FIFO reaches EthCtrlConfigShaperMaxCredit then the credit accumulation shall stop at that point and the next SW FIFO in the row is handled.

I(SRS Eth 00146)

[SWS\_Eth\_00267] {DRAFT} [

If Eth\_ProvideTxBuffer() is called and EthCtrlConfigSwBufferHandling is set to TRUE, a tuple of Buffldx pointer to the SW buffer pool (which is returned) and priority (provided by argument of the current function call) shall be stored. I(SRS Eth 00146)

### [SWS\_Eth\_00268] {DRAFT} [

When Eth\_Transmit() is called, the given Buffldx pointer shall be assigned to the SW FIFO with the EthCtrlConfigEgressFifoPriorityAssignment matches the priority given previously by the previous Eth\_ProvideTxBuffer() call (see SWS\_Eth\_00267). I(SRS\_Eth\_00146)

#### [SWS\_Eth\_00269] {DRAFT} [

Upon calling Eth\_Transmit(), messages from the SW FIFOs shall be moved to the HW FIFO as described in SWS\_Eth\_00271. |(SRS\_Eth\_00146)

#### [SWS\_Eth\_00270] {DRAFT} [

In the context of Eth\_MainFunction(), the following actions shall be executed in the given order:

- All SW FIFOs shall be iterated and their credits account updated as specified in SWS\_Eth\_00266.
- All SW FIFOs shall be iterated and checked for messages which are ready for transmission.
- For each SW FIFO iterated, transmission shall be attempeted as specified in SWS\_Eth\_00271.

(SRS\_Eth\_00146)

#### [SWS\_Eth\_00271] {DRAFT} [

Messages queued inside SW FIFOs shall be moved to the HW FIFO in the following way and order:

- Loop through each SW FIFO, starting at the highest priority in descending order
- Move the first message inside a SW FIFO whose credit account is at least EthCtrlConfigShaperMinCredit to the HW FIFO.
- If EthTrcvPhysLayerPLCAMaxBurstCount is set to 0 then only one message is moved to the HW FIFO and the iteration to the next SW FIFOs is stopped.
- Deduct the size of the message moved in bytes from the credits account of that SW FIFO.
- If EthTrcvPhysLayerPLCAMaxBurstCount is higher than 0 then proceed on top as specified in SWS\_Eth\_00272.

(SRS\_Eth\_00146)

#### [SWS\_Eth\_00272] {DRAFT} [

If frame transmission is triggered (see SWS\_Eth\_00269 and SWS\_Eth\_00270) and EthTrcvPhysLayerPLCAMaxBurstCount is higher than 0 then as many messages as EthTrcvPhysLayerPLCAMaxBurstCount indicate shall be moved additionally to the HW FIFO in the following way:

- Move messages from the SW FIFO, deducting right after each message from the credits account, until the SW FIFO has reached EthCtrlConfigShaperMinCredit.
- Check the amount of available credits and only continue with the next message if the credits account is at least EthCtrlConfigShaperMinCredit.
- If the credits account for this SW FIFO has dropped below EthCtrlConfigShaperMaxCredit then move to the next SW FIFO based on its priority and repeat the previous step until having reached a total of EthTrcvPhysLayerPLCAMaxBurstCount messages moved from the SW FIFO(s) to the HW FIFO.

(SRS\_Eth\_00146)

### 7.1.4 Configuration description

#### [SWS\_Eth\_00012] [

The Ethernet Driver module shall provide an XML file that contains the data, which is required for the SW identification (it shall contain the vendor identification, module ID and software version information), configuration and integration process. This file should describe vendor specific configuration parameters as well as it should contain recommended configuration parameter values. (()

### [SWS\_Eth\_00125] [

The MCG shall read the ECU configuration description of the Ethernet Driver module(s). Ethernet Driver related configuration data is contained in the Ethernet Driver module configuration description. I()

#### [SWS Eth 00126] [

The MCG shall ensure the consistency of the generated configuration data. (1)

#### [SWS Eth 00013][

The configuration of the Ethernet Driver module shall be calculated at ECU configuration time. None of the communication parameters shall be calculated at runtime. |()

#### [SWS Eth 00014] [

The start address of post-build time configuration data shall be passed during module initialization (see chapter 8.3.1). |()

An assignment of those configuration classes to configuration parameters can be found in chapter 10.

A detailed description of all Ethernet Driver related configuration parameters can be found in chapter 10 of this document.

#### 7.2 Error classification

Section 7.2 "Error Handling" of the document "General Specification of Basic Software Modules" [19] describes the error handling of the Basic Software in detail. Above all, it constitutes a classification scheme consisting of five error types which may occur in BSW modules.

Based on this foundation, the following section specifies particular errors arranged in the respective subsections below.

### 7.2.1 Development Errors

[SWS\_Eth\_00016][

Type of error	Related error code	Error value
Invalid controller index	ETH_E_INV_CTRL_IDX	0x01
Eth module or controller was not initialized	ETH_E_UNINIT	0x02
Invalid pointer in parameter list	ETH_E_PARAM_POINTER	0x03
Invalid parameter	ETH_E_INV_PARAM	0x04
Invalid mode	ETH_E_INV_MODE	0x05

**(**()

#### 7.2.2 Runtime Errors

There are no runtime errors.

#### 7.2.3 Transient Faults

There are no transient faults.

#### 7.2.4 Production Errors

There are no production errors.

#### 7.2.5 Extended Production Errors

Extended production errors are handled as events of the Diagnostic Event Manager. The event IDs are defined in the following tables, while the actual values are assigned externally by the configuration of the Diagnostic Event Manager, and are included in the module via Dem.h.

Error Name:	ETH_E_ACCESS		
Short Description:	Ethernet Controller Access Failure.		
Long Description:	Monitors the access to the Ethernet Controller.		
	Fail	When access to the Ethernet Controller fails the module shall report the extended production error with event status DEM_EVENT_STATUS_PREFAILED to DEM.	
Detection Criteria:	Pass	When access to the Ethernet Controller succeds the module shall report the extended production error with event status DEM_EVENT_STATUS_PREPASSED to DEM.	
Secondary Parameters:	None.		
Time Required:	None.		
Monitor Frequency	None.		

[SWS\_Eth\_00174] [

Error Name:	ETH_E_RX_FRAMES_LOST		
Short Description:	Ethernet Frames Lost.		
Long Description:	Monitors the loss of Ethernet frames during reception.		
	Fail	When lost frames are detected the module shall report the extended production error with event status DEM_EVENT_STATUS_PREFAILED to DEM.	
Detection Criteria:	Pass	When Ethernet Controller is successfully initialized the module shall report the extended production error with event status DEM_EVENT_STATUS_PREPASSED to DEM.	
Secondary Parameters:	None.		
Time Required:	None.		
Monitor Frequency	None.		

]()

[SWS\_Eth\_00219] [

[ <del>0110</del> _Eui_00210]			
Error Name:	ETH_E_CRC		
Short Description:	CRC Failure		
Long Description:	Monitors invalid Ethernet frames during reception.		
	Fail	When invalid frames are detected the module shall report the extended production error with event status DEM_EVENT_STATUS_PREFAILED to DEM.	
Detection Criteria:	Pass	When Ethernet Controller is successfully initialized the module shall report the extended production error with event status DEM_EVENT_STATUS_PREPASSED to DEM.	
Secondary Parameters:	None.		
Time Required:	None.		
Monitor Frequency	None.		

]()

[SWS\_Eth\_00220] [

·			
Error Name:	ETH_E_UNDERSIZEFRAME		
Short Description:	Frame Size Underflow		
Long Description:	Monitors undersize Ethernet frames during reception.		
		When invalid frames are detected the module shall report	
Detection Criteria:	the extended production error with event status		
		DEM_EVENT_STATUS_PREFAILED to DEM.	

		When Ethernet Controller is successfully initialized the module shall report the extended production error with event status DEM_EVENT_STATUS_PREPASSED to DEM.
Secondary Parameters:	None.	
Time Required:	None.	
Monitor Frequency	None.	

[SWS\_Eth\_00221] [

<u> 1                          </u>			
Error Name:	ETH_E_OVERSIZEFRAME		
Short Description:	Frame Size Overflow		
Long Description:	Monitors oversize Ethernet frames during reception.		
	Fail	When invalid frames are detected the module shall report the extended production error with event status DEM_EVENT_STATUS_PREFAILED to DEM.	
Detection Criteria:	Pass	When Ethernet Controller is successfully initialized the module shall report the extended production error with event status DEM_EVENT_STATUS_PREPASSED to DEM.	
Secondary Parameters:	None.		
Time Required:	None.		
Monitor Frequency	None.		

]()

[SWS\_Eth\_00222] [

ETH_E_ALIGNMENT		
Frame Alignm	ent Error	
Monitors alignment errors.		
	When invalid frames are detected the module shall report the extended production error with event status DEM_EVENT_STATUS_PREFAILED to DEM.	
	When Ethernet Controller is successfully initialized the module shall report the extended production error with event status DEM_EVENT_STATUS_PREPASSED to DEM.	
None.		
None.		
None.		
	Frame Alignm Monitors align Fail Pass None.	

]()

[SWS\_Eth\_00223] [

<u> </u>				
Error Name:	ETH_E_SIN	ETH_E_SINGLECOLLISION		
Short Description:	Single Frame	Single Frame Collision		
Long Description:	Monitors Eth	Monitors Ethernet single frame collision.		
	Fail	When frame collisions are detected the module shall report the extended production error with event status DEM_EVENT_STATUS_PREFAILED to DEM.		
Detection Criteria:	Pass	When Ethernet Controller is successfully initialized the module shall report the extended production error with event status DEM_EVENT_STATUS_PREPASSED to DEM.		
Secondary Parameters:	None.			

Time Required:	None.
Monitor Frequency	None.

[SWS\_Eth\_00224] [

Error Name:	ETH_E_MULTIPLECOLLISION		
Short Description:	Multiple Frame Collision		
Long Description:	Monitors Ethernet multiple frame collision.		
		When fram collisions are detected the module shall report the extended production error with event status DEM_EVENT_STATUS_PREFAILED to DEM.	
Detection Criteria:		When Ethernet Controller is successfully initialized the module shall report the extended production error with event status DEM_EVENT_STATUS_PREPASSED to DEM.	
Secondary Parameters:	None.		
Time Required:	None.		
Monitor Frequency	None.		

]()

[SWS\_Eth\_00225] [

Error Name:	ETH_E_LATECOLLISION		
Short Description:	Late Frame Co	Late Frame Collision	
Long Description:	Monitors Ethernet late frame collision.		
		When frame collisions are detected the module shall report the extended production error with event status DEM_EVENT_STATUS_PREFAILED to DEM.	
Detection Criteria:		When Ethernet Controller is successfully initialized the module shall report the extended production error with event status DEM_EVENT_STATUS_PREPASSED to DEM.	
Secondary Parameters:	None.		
Time Required:	None.		
Monitor Frequency	None.

# 8 API specification

# 8.1 Imported types

This chapter lists all types included from the following modules:

[SWS\_Eth\_00026][

[0o_=		
Module	Header File	Imported Type
ComStack_Types	ComStack_Types.h	BufReq_ReturnType
Dem	Rte_Dem_Type.h	Dem_EventIdType
	Rte_Dem_Type.h	Dem_EventStatusType
Std	Std_Types.h	Std_ReturnType
	Std_Types.h	Std_VersionInfoType

J(SRS\_Eth\_00127)

# 8.2 Type definitions

# 8.2.1 Eth\_ConfigType

[SWS\_Eth\_00156][

Name	Eth_ConfigType
Kind	Structure
Description	Implementation specific structure of the post build configuration
Available via	Eth.h

]()

# 8.2.2 Eth\_ModeType

[SWS Eth 00158]{OBSOLETE} [

<u> </u>				
Name	Eth_ModeType (obsolete)			
Kind	Enumeration			
Panga	ETH_MODE_ DOWN	0x00	disable the Ethernet communication channel and set its corresponding hardware to an lowpower sleep mode	
Range	ETH_MODE_ ACTIVE	0x01	enable the Ethernet communication channel and set its corresponding hardware to an power on mode	

	Description	This is an generic type and used in the layers of the Ethernet communication stack (e.g. Ethlf, Eth, EthSwt, EthTrcv) to enable and disable, respectively, the Ethernet communcation channel and set the corresponding hardware (e.g. Ethernet controller, Ethernet Switch port, Ethernet transceiver) to an lowpower sleep and power on mode, respectively.  Tags:atp.Status=obsolete	
Available via	Eth_GeneralTypes.h		

[SWS\_Eth\_91008]{DRAFT} [

Name	Eth_ModeType (draft)		
Kind	Enumeration		
	ETH_MODE_ DOWN	0x00	disable the Ethernet Rx/Tx communication and set its corresponding hardware to a lowpower sleep mode and initiate a sleep process, if the Ethernet hardware provide such a feature. E.g. request a sleep on data line for OA TC10 compatible Ethernet hardware
Range	ETH_MODE_ ACTIVE	0x01	enable the Ethernet Rx/Tx communication and set its corresponding hardware to an power on mode
	ETH_MODE_ ACTIVE_WITH_ WAKEUP_ REQUEST	0x02	enable the Ethernet Rx/Tx communication, set its corresponding Ethernet hardware to an power on mode and request an wake-up on the network, if the Ethernet hardware provide a wake-up feature. E.g. wake-up on data line for OA TC10 compatible Ethernet hardware
Description	This is an generic type and used in the layers of the Ethernet communication stack (e.g. Ethlf, Eth, EthSwt, EthTrcv) to enable and disable, respectively, the Ethernet communcation channel and set the corresponding hardware (e.g. Ethernet controller, Ethernet Switch port, Ethernet transceiver) to an lowpower sleep and power on mode, respectively. The type also support to transfer a wake-up request from the services layer (ComM) to the communication drivers (EthTrcv). This could be used e.g. for Ethernet hardware that has the capability to wake-up and sleep on data line (see OA TC10)  Tags:atp.Status=draft		
Available via	Eth_GeneralTypes.h		

]()

8.2.3 Eth\_StateType

[SWS\_Eth\_00159][

Name	Eth_StateType		
Kind	Enumeration		
Panga	ETH_STATE_UNINIT	0x00	Driver is not yet configured
Range	ETH_STATE_INIT	0x01	Driver is configured
Description	Status supervision used for Development Error Detection. The state shall be available for debugging.		
Available via	Eth_GeneralTypes.h		

# 8.2.4 Eth\_FrameType

[SWS\_Eth\_00160][

[0110111_00	
Name	Eth_FrameType
Kind	Туре
Derived from	uint16
Description	This type defines the Ethernet frame type used in the Ethernet frame header
Available via	Eth_GeneralTypes.h

]()

# 8.2.5 Eth\_DataType

[SWS Eth 00161][

Name	Eth_DataType			
Kind	Туре			
	Basetype	Variation		
Derived	uint16	8 or 16 bit CPU		
from	uint32	32 bit CPU		
	uint8	8, 16 or 32 bit CPU		
Description	This type defines the Ethernet data type used for data transmission. Its definition depends on the used CPU.			
Available via	Eth_GeneralTypes.h			

# 8.2.6 Eth\_BufldxType

[SWS\_Eth\_00175][

Name	Eth_BufldxType
Kind	Туре
Derived from	uint32
Description	Ethernet buffer identifier type.
Available via	Eth_GeneralTypes.h

]()

# 8.2.7 Eth\_RxStatusType

[SWS\_Eth\_00162][

<u></u>					
Name	Eth_RxStatusType				
Kind	Enumeration				
	ETH_RECEIVED	0x00	Ethernet frame has been received, no further frames available		
Range	ETH_NOT_RECEIVED	0x01	Ethernet frame has not been received, no further frames available		
	ETH_RECEIVED_MORE_ DATA_AVAILABLE	0x02	Ethernet frame has been received, more frames are available		
Description	Used as out parameter in Eth_Receive() indicates whether a frame has been received and if so, whether more frames are available or frames got lost.				
Available via	Eth_GeneralTypes.h				

]()

# 8.2.8 Eth\_FilterActionType

[SWS\_Eth\_00163][

Name	Eth_FilterActionType			
Kind	Enumeration			
Barres	ETH_ADD_TO_ FILTER	0x00	add the MAC address to the filter, meaning allow reception	
Range	ETH_REMOVE_ FROM_FILTER	0x01	remove the MAC address from the filter, meaning reception is blocked in the lower layer	

Description	The Enumeration Type Eth_FilterActionType describes the action to be taklen for the MAC address given in *PhysAddrPtr.	
Available via	Eth_GeneralTypes.h	

# 8.2.9 Eth\_TimeStampQualType

[SWS\_Eth\_00177][

Name	Eth_TimeStampQualType			
Kind	Enumeration			
	ETH_VALID	0		
Range	ETH_INVALID			
	ETH_UNCERTAIN	2		
Description	Depending on the HW, quality information regarding the evaluated time stamp might be supported. If not supported, the value shall be always Valid. For Uncertain and Invalid values, the upper layer shall discard the time stamp.			
Available via	Eth_GeneralTypes.h			

]()

# 8.2.10 Eth\_TimeStampType

[SWS\_Eth\_00178][

[SWS_⊑tn_	00176]			
Name	Eth_TimeStampType			
Kind	Structure			
	nanoseconds			
	Туре	uint32		
	Comment	Nanoseconds part of the time		
Elomonts	seconds			
Elements	Туре	uint32		
	Comment	32 bit LSB of the 48 bits Seconds part of the time		
	secondsHi			
	Туре	uint16		

	Comment	16 bit MSB of the 48 bits Seconds part of the time	
Description	Variables of this type are used for expressing time stamps including relative time and absolute calendar time. The absolute time starts at 1970-01-01.  0 to 281474976710655s == 3257812230d [0xFFFF FFFF FFFF]  0 to 999999999ns [0x3B9A C9FF] invalid value in nanoseconds: [0x3B9A CA00] to [0x3FFF FFFF] Bit 30 and 31 reserved, default: 0		
Available via	Eth_GeneralTypes.h		

# 8.2.11 Eth\_TimeIntDiffType

[SWS Eth 00179][

[5445_141_56175]			
Name	Eth_TimeIntDiffType		
Kind	Structure		
	diff		
	Туре	Eth_TimeStampType	
Elements	Comment	nment time difference	
Liements	sign		
	Туре	boolean	
	Comment	Positive (True) / negative (False) time	
Description	Variables of this type are used to express time differences.		
Available via	Eth_GeneralTypes.h		

]()

# 8.2.12 Eth\_RateRatioType

**ISWS Eth 001801** 

	O 1 O 1 O 1 O 1 O 1 O 1 O 1 O 1 O 1 O 1		
Name	Eth_RateRatioType		
Kind	Structure		
	IngressTimeStampDelta		
	Туре	Eth_TimeIntDiffType	
Elements	Comment	IngressTimeStampSync2 - IngressTimeStampSync1	
	OriginTimeStampDelta		
	Туре	Eth_TimeIntDiffType	

	Comment	OriginTimeStampSync2[FUP2] - OriginTimeStampSync1[FUP1]
Description	Variables of this type are used to express frequency ratios.	
Available via	Eth_GeneralTypes.h	

# 8.2.13 Eth\_MacVlanType

[SWS Eth 91001][

[SWS_Eth_91001]			
Name	Eth_MacVlanType		
Kind	Structure		
	MacAddr		
	Туре	Array of uint8	
	Size	6	
	Comment	Specifies the MAC address [0255,0255,0255,0255,0255]	
	VlanId		
Elements	Туре	uint16	
	Comment	Specifies the VLAN address 065535	
	SwitchPort		
	Туре	uint32	
	Comment	Specifies the ports of the switch as bit mask (0x00000001->Port0, 0x80000001->Port31+Port0)	
Description	This type is used to read out addresses from the address resolution logic (ARL) table of the switch. typedef struct { uint8 MacAddr[6U]; uint16 VlanId; uint32 SwitchPort; } Eth_MacVlan Type; In case of Macaddr contains a Multicast Address MacVlanType.SwitchPort shall be handled as Bitmask, each bit represents a Switch Port, Bit 0 represents EthSwichtPort Idx = 0, Bit 1 represents EthSwichtPortIdx = 1 and so on. In case of Macaddr contains not a Multicast Address MacVlanType.SwitchPort shall be handled as a value representing the EthSwitchPortIdx.		
Available via	Eth_GeneralTypes.h		

J(SRS\_ETH\_00086)

# 8.2.14 Eth\_CounterType

[SWS\_Eth\_91007][

Name	Eth_CounterType		
Kind	Structure		
	DropPktBufOverrun		
	Туре	uint32	
	Comment	dropped packets due to buffer overrun	
	DropPktCrc		
	Туре	uint32	
	Comment	dropped packets due to CRC errors	
	UndersizePkt		
	Туре	uint32	
	Comment	number of undersize packets which were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed. (see IETF RFC 1757)	
	OversizePkt		
	Туре	uint32	
	Comment	number of oversize packets which are longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed. (see IETF RFC 1757)	
Elements	AlgnmtErr		
	Туре	uint32	
	Comment	number of alignment errors, i.e. packets which are received and are not an integral number of octets in length and do not pass the CRC.	
	SqeTestErr		
	Туре	uint32	
	Comment	SQE test error according to IETF RFC1643 dot3StatsSQETestErrors	
	DiscInbdPkt		
	Туре	uint32	
	Comment	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. (see IETF RFC 2233 ifInDiscards)	
	ErrInbdPkt		
	Туре	uint32	
	Comment	total number of erroneous inbound packets	
	DiscOtbdPkt		

	1
Туре	uint32
Comment	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space. (see IETF RFC 2233 ifOutDiscards)
ErrOtbdPkt	
Туре	uint32
Comment	total number of erroneous outbound packets
SnglCollPkt	
Туре	uint32
Comment	Single collision frames: A count of successfully transmitted frames on a particular interface for which transmission is inhibited by exactly one collision. (see IETF RFC1643 dot3StatsSingleCollisionFrames)
MultCollPkt	
Туре	uint32
Comment	Multiple collision frames: A count of successfully transmitted frames on a particular interface for which transmission is inhibited by more than one collision. (see IETF RFC1643 dot3StatsMultipleCollisionFrames)
DfrdPkt	
Туре	uint32
Comment	Number of deferred transmission: A count of frames for which the first transmission attempt on a particular interface is delayed because the medium is busy. (see IETF RFC1643 dot3StatsDeferredTransmissions)
LatCollPkt	
Туре	uint32
Comment	Number of late collisions: The number of times that a collision is detected on a particular interface later than 512 bit-times into the transmission of a packet. (see IETF RFC1643 dot3StatsLateCollisions)
HwDepCtr0	
Туре	uint32
Comment	hardware dependent counter value
HwDepCtr1	
Туре	uint32
Comment	hardware dependent counter value
HwDepCtr2	
Туре	uint32

	Comment	hardware dependent counter value
	HwDepCtr3	
	Туре	uint32
	Comment	hardware dependent counter value
Description	Statistic counter for diagnostics.	
Available via	Eth_GeneralTypes.h	

# 8.2.15 Eth\_RxStatsType

[SWS_Eth_91002][			
Name	Eth_RxStatsType		
Kind	Structure		
	RxStatsDro	RxStatsDropEvents	
	Туре	uint32	
	Comment	The total number of events in which packets were dropped by the probe due to lack of resources. Also described in IETF RFC 2819 MIB ether StatsDropEvents.	
	RxStatsOctets		
	Туре	uint32	
	Comment	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets). Also described in IETF RFC 2819 MIB etherStatsOctets.	
Florente	RxStatsPkts		
Elements	Туре	uint32	
	Comment	The total number of packets (including bad packets, broadcast packets, and multicast packets) received. Also described in IETF RFC 2819 MIB etherStatsPkts	
	RxStatsBroadcastPkts		
	Туре	uint32	
	Comment	The total number of good packets received that were directed to the broadcast address. Also described in IETF RFC 2819 MIB etherStats BroadcastPkts	
	RxStatsMulticastPkts		
	Туре	uint32	

	Comment	The total number of good packets received that were directed to a multicast address. Also described in IETF RFC 2819 MIB etherStats MulticastPkts.		
	RxStatsCrcAlignErrors			
	Туре	uint32		
	Comment	The total number of packets received that had a length of bertween 64 and 1518 octets that had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Also described in IETF RFC 2819 MIB etherStatsCRCAlignErrors		
	RxStatsUnd	dersizePkts		
	Туре	uint32		
	Comment	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed. Also described in IETF RFC 2819 MIB etherStatsUndersizePkts.		
	RxStatsOve	ersizePkts		
	Туре	uint32		
	Comment	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed. Also described in IETF RFC 2819 MIB etherStatsOversizePkts		
	RxStatsFragments			
	Туре	uint32		
	Comment	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Also described in IETF RFC 2819 MIB etherStatsFragments.		
	RxStatsJabbers			
	Туре	uint32		
	Comment	The total number of packets received that were longer than 1518 octets, and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Also described in IETF RFC 2819 MIB ether StatsJabbers.		
	RxStatsCollisions			
	Туре	uint32		
	Comment	The best estimate of the total number of collisions on this Ethernet segment. Also described in IETF RFC 2819 MIB etherStatsCollisions		
	RxStatsPkts64Octets			
	Туре	uint32		

	Comment	The total number of packets (including bad packets) received that were 64 octets in length. Also described in IETF RFC 2819 MIB etherStats Pkts64Octets				
	RxStatsPkts65to127Octets					
	Туре	uint32				
	Comment	The total number of packets (including bad packets) received that were between 65 and 127 octets in length. Also described in IETF RFC 2819 MIB etherStatsPkts65to127Octets				
	RxStatsPkt	s128to255Octets				
	Туре	uint32				
	Comment	The total number of packets (including bad packets) received that were between 128 and 255 octets in length. Also described in IETF RFC 2819 MIB etherStatsPkts128to255Octets				
	RxStatsPkt	s256to511Octets				
	Туре	uint32				
	Comment	The total number of packets (including bad packets) received that were between 256 and 511 octets in length. Also described in IETF RFC 2819 MIB etherStatsPkts256to511Octets				
	RxStatsPkts512to1023Octets  Type uint32					
	Comment  The total number of packets (including bad packets) received that were between 512 and 1023 octets in length. Also described in IETF RFC 2 MIB etherStatsPkts512to1023Octets					
	RxStatsPkt	s1024to1518Octets				
	Туре	uint32				
	Comment	The total number of packets (including bad packets) received that were between 1024 and 1518 octets in length. Also described in IETF RFC 2819 MIB etherStatsPkts1024to1518Octets				
	RxUnicastF	rames				
	Туре	uint32				
	Comment	The number of subnetwork-unicast packets delivered to a higher-layer protocol. Also described in IETF RFC1213 MIB ifInUcastPkts				
Description	Statistic counter for diagnostics.					
Available via	Eth_GeneralTypes.h					

J(SRS\_Eth\_00127)

# 8.2.16 Eth\_TxStatsType

[SWS\_Eth\_91003][

[OVIO_Etti_	91003]			
Name	Eth_TxStatsType			
Kind	Structure			
	TxNumberC	DfOctets		
	Туре	uint32		
	Comment	The total number of octets transmitted out of the interface, including framing characters. Also described in IETF RFC1213 MIB ifOutOctets.		
	TxNUcastP	kts		
	Type uint32			
Elements	Comment	The total number of packets that higher-level protocols requested be transmitted to a non-unicast (i.e., a subnetwork-broadcast or subnetwork-multicast) address, including those that were discarded or not sent. Also described in IETF RFC1213 MIB ifOutNUcastPkts		
	TxUniCastPkts			
	Туре	uint32		
	Comment	The total number of packets that higher-level protocols requested be transmitted to a subnetwork-unicast address, including those that were discarded or not sent. Also described in IETF RFC1213 MIB ifOutUcast Pkts.		
Description	Statistic counter for diagnostics.			
Available via	Eth_GeneralTypes.h			

J(SRS\_Eth\_00127)

# 8.2.17 Eth\_TxErrorCounterValuesType

[SWS\_Eth\_91004][

Name	Eth_TxErrorCounterValuesType			
Kind	Structure	Structure		
	TxDroppedNoErrorPkts			
	Туре	uint32		
Elements	Comment	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space. Also described in IETF RFC1213 MIB ifOutDiscards		
	TxDroppedErrorPkts			

Туре	uint32			
Comment	transmitted because of errors. Also described in IETF RFC1213 MIB ifOut Errors			
TxDeferred	Trans			
Туре	uint32			
Comment	A count of frames for which the first transmission attempt on a particular interface is delayed because the medium is busy. The count represented by an instance of this object does not include frames involved in collisions. Also described in IETF RFC1643 MIB dot3StatsDeferred Transmissions			
TxSingleCo	ollision			
Туре	uint32			
Comment	A count of successfully transmitted frames on a particular interface for which transmission is inhibited by exactly one collision. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the TxUniCastPkts and TxNUcastPkts and is not counted by the corresponding instance of the TxMultiple Collision object. Also described in IETF RFC1643 MIB dot3StatsSingle CollisionFrames			
TxMultiple0	Collision			
Туре	uint32			
Comment	A count of successfully transmitted frames on a particular interface for which transmission is inhibited by more than one collision. A frame that is counted by an instance of this object is also counted by the corresponding instance of either the TxUniCastPkts and TxNUcastPkts and is not counted by the corresponding instance of the TxSingleCollision object. Also described in IETF RFC1643 MIB dot3StatsMultipleCollision Frames.			
TxLateColli	sion			
Туре	uint32			
Comment	The number of times that a collision is detected on a particular interface later than 512 bit-times into the transmission of a packet. Five hundred and twelve bit-times corresponds to 51.2 microseconds on a 10 Mbit/s system. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics. Also described in IETF RFC1643 MIB dot3StatsLateCollisions			
TxExcessiv	TxExcessiveCollison			
Туре	uint32			
Comment	A count of frames for which transmission on a particular interface fails due to excessive collisions. Also described in IETF RFC1643 MIB dot3StatsExcessiveCollisions			
•				

Description	Statistic counters for diagnostics.	
Available via	Eth_GeneralTypes.h	

(SRS\_Eth\_00127)

## 8.3 Function definitions

This is a list of functions provided for upper layer modules.

## 8.3.1 Eth\_Init

# [SWS\_Eth\_00027][

[3W3_Etil_00027]		
Service Name	Eth_Init	
Syntax	<pre>void Eth_Init (   const Eth_ConfigType* CfgPtr )</pre>	
Service ID [hex]	0x01	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	CfgPtr Points to the implementation specific structure	
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	Initializes the Ethernet Driver	
Available via	Eth.h	

]()

## [SWS\_Eth\_00028] [

The function shall store the access to the configuration structure for subsequent API calls. |()

## [SWS\_Eth\_00034]{OBSOLETE} [

The function shall for all configured Ethernet controllers in the current EthConfigSet:

- Disable all controllers
- Clear pending Ethernet interrupts
- Configure all controller configuration parameters (e.g. interrupts, frame length, frame filter, ...)
- Configure all transmit / receive resources (e.g. buffer initialization)

delete all pending transmit and receive requests.

]()

### [SWS\_Eth\_00275]{DRAFT} [

The function shall for all configured Ethernet controllers in the current EthConfigSet:

- Disable Rx/Tx communication of all Ethernet controllers
- Clear pending Ethernet interrupts
- Configure all controller configuration parameters (e.g. interrupts, frame length, frame filter, ...)
- Configure all transmit / receive resources (e.g. buffer initialization)
- delete all pending transmit and receive requests.

**(**()

<u>Note</u>: The implementation has to ensure that the control capabilities (e.g. MDIO) provided by an Ethernet controller which are used by other driver modules (e.g. Ethernet switch driver) are always available independent of the requested mode (ETH\_MODE\_DOWN or ETH\_MODE\_ACTIVE). Therefore the Ethernet driver may initialize the control capabilities within Eth\_Init.

### [SWS\_Eth\_00029] [

The function shall change the state of the component from ETH\_STATE\_UNINIT to ETH\_STATE\_INIT. |()

# [SWS\_Eth\_00039] [

The function shall check the access to the Ethernet controller. If the check fails, the function shall raise the production error ETH\_E\_ACCESS.|()

### [SWS\_Eth\_00031][

Caveat: The API has to be called during initialization. (1)

## 8.3.2 Eth\_SetControllerMode

## [SWS\_Eth\_00041]{OBSOLETE} [

Service Name	Eth_SetControllerMode (obsolete)		
Syntax	<pre>Std_ReturnType Eth_SetControllerMode (   uint8 CtrlIdx,   Eth_ModeType CtrlMode )</pre>		
Service ID [hex]	0x03		
Sync/Async	Asynchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the controller within the context of the Ethernet Driver	
	CtrlMode	ETH_MODE_DOWN: disable the controller ETH_MODE_ACTIVE: enable the controller	

Parameters (inout)	None		
Parameters (out)	None		
Return value	Std_Return- Type	E_OK: success E_NOT_OK: controller mode could not be changed	
Description	Enables / disables the indexed controller  Tags:atp.Status=obsolete		
Available via	Eth.h		

]()

[SWS\_Eth\_91009]{DRAFT} [

Service Name	Eth_SetControllerMode (draft)		
ocivioc ivanic	Liti_Octoontrollerivioue (urart)		
Syntax	<pre>Std_ReturnType Eth_SetControllerMode (    uint8 CtrlIdx,    Eth_ModeType CtrlMode )</pre>		
Service ID [hex]	0x03		
Sync/Async	Asynchronous		
Reentrancy	Non Reentrant		
	Ctrlldx	Index of the controller within the context of the Ethernet Driver	
Parameters (in)	CtrlMode	ETH_MODE_DOWN: Disable Rx/Tx communication of the Ethernet controller ETH_MODE_ACTIVE: Enable Rx/Tx communication of the Ethernet controller	
Parameters (inout)	None		
Parameters (out)	None		
Return value	Std_Return- Type	E_OK: success E_NOT_OK: controller mode could not be changed	
Description	Enables / Disables Rx/Tx communication of the indexed controller Tags:atp.Status=draft		
Available via	Eth.h		

]()

## [SWS\_Eth\_00042]{OBSOLETE} [

The function shall:

- Put the controller in the specified mode given in the parameter 'CtrlMode':
  - O Upon mode ETH\_MODE\_DOWN the driver shall:
    - Disable the Ethernet controller
    - Reset all transmit and receive buffers (i.e. ignore all pending transmission and reception requests)
  - O Upon mode ETH\_MODE\_ACTIVE:
    - Enable all transmit and receive buffers
    - Enable the Ethernet controller

**(**()

## [SWS\_Eth\_00276]{DRAFT} [

The function shall put the controller in the specified mode given in the parameter 'CtrlMode':

- Upon mode ETH\_MODE\_DOWN the driver shall:
  - Disable Tx/Rx communication of the Ethernet controller
  - Reset all transmit and receive buffers (i.e. ignore all pending transmission and reception requests)
- O Upon mode ETH\_MODE\_ACTIVE:
  - Enable all transmit and receive buffers
  - Activate Rx/Tx communication of the Ethernet controller

**(**()

## [SWS\_Eth\_00043] [

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT otherwise (if DET is disabled) return E\_NOT\_OK. ]()

### [SWS\_Eth\_00044] [

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX otherwise (if DET is disabled) return E\_NOT\_OK. J()

#### [SWS Eth 00168] [

The function shall check the access to the Ethernet controller. If the check fails, the function shall raise the production error ETH\_E\_ACCESS and return E\_NOT\_OK. ()

## [SWS\_Eth\_00045] [

Caveat: The function requires previous controller initialization (Eth\_Init). (()

### 8.3.3 Eth GetControllerMode

[**SWS\_Eth\_00046]**{OBSOLETE} [

Service Name	Eth_GetControllerMode (obsolete)		
Syntax	<pre>Std_ReturnType Eth_GetControllerMode (   uint8 CtrlIdx,   Eth_ModeType* CtrlModePtr )</pre>		
Service ID [hex]	0x04		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the controller within the context of the Ethernet Driver	
Parameters (inout)	None		
Parameters (out)	CtrlModePtr	ETH_MODE_DOWN: the controller is disabled ETH_MODE_ACTIVE: the controller is enabled	
Return value	Std_Return- Type	E_OK: success E_NOT_OK: controller mode could not be obtained	
Description	Obtains the state of the indexed controller  Tags:atp.Status=obsolete		
Available via	Eth.h		

]()

 $\hbox{\tt [SWS\_Eth\_91010]} \{ \hbox{\tt DRAFT} \} \; \lceil$ 

Service Name	Eth_GetControllerMode (draft)		
Syntax	<pre>Std_ReturnType Eth_GetControllerMode (   uint8 CtrlIdx,   Eth_ModeType* CtrlModePtr )</pre>		
Service ID [hex]	0x04		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the controller within the context of the Ethernet Driver	
Parameters (inout)	None		
Parameters (out)	CtrlModePtr	ETH_MODE_DOWN: the Rx/Tx communication of the Ethernet controller is disabled ETH_MODE_ACTIVE: the Rx/Tx communication of the Ethernet controller is enabled	
Return value	Std_Return- Type	E_OK: success E_NOT_OK: controller mode could not be obtained	
Description	Obtains the communication state of the indexed controller Tags:atp.Status=draft		
Available via	Eth.h		

|()

# [SWS\_Eth\_00047]{OBSOLETE} [

The function shall read the current controller mode. (()

# [SWS\_Eth\_00277]{DRAFT} [

The function shall read the current Rx/Tx communication state of the indexed controller. J()

### [SWS Eth 00048] [

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT otherwise (if DET is disabled) return E\_NOT\_OK. I()

## [SWS\_Eth\_00049] [

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX otherwise (if DET is disabled) return E\_NOT\_OK. |()

## [SWS\_Eth\_00050] [

If development error detection is enabled: the function shall check the parameter CtrlModePtr for being valid. If the check fails, the function shall raise the development

error ETH\_E\_PARAM\_POINTER otherwise (if DET is disabled) return E\_NOT\_OK. I()

[SWS\_Eth\_00051] [

Caveat: The function requires previous controller initialization (Eth\_Init). |()

## 8.3.4 Eth\_GetPhysAddr

## [SWS\_Eth\_00052][

Service Name	Eth_GetPhysAddr		
Syntax	<pre>void Eth_GetPhysAddr (   uint8 CtrlIdx,   uint8* PhysAddrPtr )</pre>		
Service ID [hex]	0x08	0x08	
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the controller within the context of the Ethernet Driver	
Parameters (inout)	None		
Parameters (out)	PhysAddrPtr	Physical source address (MAC address) in network byte order.	
Return value	void None		
Description	Obtains the physical source address used by the indexed controller		
Available via	Eth.h		

**(**)

### [SWS Eth 00053] [

The function shall read the source address used by the indexed controller. (1)

### [SWS Eth 00054] [

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT. |()

### [SWS\_Eth\_00055] [

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX. I()

[SWS\_Eth\_00056] [

If development error detection is enabled: the function shall check the parameter PhysAddrPtr for being valid. If the check fails, the function shall raise the development error ETH\_E\_PARAM\_POINTER. |()

[SWS\_Eth\_00057] [

Caveat: The function requires previous controller initialization (Eth\_Init). J()

## 8.3.5 Eth\_SetPhysAddr

# [SWS\_Eth\_00151][

Service Name	Eth_SetPhy	ysAddr
Syntax	<pre>void Eth_SetPhysAddr (   uint8 CtrlIdx,   const uint8* PhysAddrPtr )</pre>	
Service ID [hex]	0x13	
Sync/Async	Synchronou	us
Reentrancy	Non Reentr	rant for the same Ctrlldx, reentrant for different
Poromotoro (in)	Ctrlldx	Index of the Ethernet controller within the context of the Ethernet Driver.
Parameters (in)	PhysAddr Ptr	Pointer to memory containing the physical source address (MAC address) in network byte order.
Parameters (inout)	None	
Parameters (out)	None	
Return value	None	
Description	Sets the physical source address used by the indexed controller	
Available via	Eth.h	

|()

[SWS\_Eth\_00139] [

The function shall update the source address used by the indexed controller. (()

[SWS\_Eth\_00140] [

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT. ()

[SWS\_Eth\_00141][

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX. |()

[SWS\_Eth\_00142] [

If development error detection is enabled: the function shall check the parameter PhysAddrPtr for being valid. If the check fails, the function shall raise the development error ETH\_E\_PARAM\_POINTER. |()

[SWS\_Eth\_00143] [

Caveat: The function requires previous controller initialization (Eth\_Init). |()

# 8.3.6 Eth\_UpdatePhysAddrFilter

[SWS\_Eth\_00152][

[OVVO_Ettt_00				
Service Name	Eth_UpdatePhysAddrFilter			
Syntax	<pre>Std_ReturnType Eth_UpdatePhysAddrFilter (   uint8 CtrlIdx,   const uint8* PhysAddrPtr,   Eth_FilterActionType Action )</pre>			
Service ID [hex]	0x12	0x12		
Sync/Async	Synchronou	IS		
Reentrancy	Non Reentra	ant for the same Ctrlldx, reentrant for different		
	Ctrlldx Index of the Ethernet controller within the context of the Ethern Driver			
Parameters (in)	PhysAddr Ptr	Pointer to memory containing the physical destination address (MAC address) in network byte order. This is the multicast destination address of the layer 2 Ethernet packet.		
	Action	Add or remove the address from the Ethernet controllers filter.		
Parameters (inout)	None			
Parameters (out)	None			
Return value	Std Return- Type	E_OK: filter was successfully changed E_NOT_OK: filter could not be changed		
Description	Update the physical source address to/from the indexed controller filter. If the Ethernet Controller is not capable to do the filtering, the software has to do this.			
Available via	Eth.h			

## [SWS\_Eth\_00150] [

The function shall update the physical address receive filter of the indexed controller. ()

### [SWS\_Eth\_00245][

The Ethernet driver module will receive a frame when the destination Address match the PhyAddrPtr passed here. (e.g matching can be done via hash table or simple pattern matching) \( \)()

Note: Underlying HW mechanism can be used if available. Otherwise the Ethernet driver needs to do this by software.

# [SWS\_Eth\_00246][

If the matching is positive, the upper layer shall be notified by calling RxIndication() callback.

If the matching is negative, the frame shall be discarded. (1)

## [SWS\_Eth\_00164] [

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT. (()

### [SWS Eth 00165][

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX. |()

### [SWS\_Eth\_00166] [

If development error detection is enabled the function shall check the parameter PhysAddrPtr for being valid. If the check fails, the function shall raise the development error ETH\_E\_PARAM\_POINTER. (()

## [SWS\_Eth\_00167] [

Caveat: The function requires previous controller initialization (Eth. Init). (()

### [SWS\_Eth\_00144] [

If the physical source address (MAC address) is set to FF:FF:FF:FF:FF; this shall completely open the filter. J()

#### [SWS Eth 00146][

If this API is used and the hardware does not support filtering, promiscuous mode shall be enabled during initialization. J()

[SWS\_Eth\_00147] [

If the physical source address (MAC address) is set to 00:00:00:00:00:00, this shall reduce the filter to the controllers unique unicast MAC address and end promiscuous mode if it was turned on. ]()

# 8.3.7 Eth\_WriteMii

## [SWS\_Eth\_00058][

Service Name	Eth_WriteMii	
Syntax	<pre>Std_ReturnType Eth_WriteMii (   uint8 CtrlIdx,   uint8 TrcvIdx,   uint8 RegIdx,   uint16 RegVal )</pre>	
Service ID [hex]	0x05	
Sync/Async	Asynchronous	
Reentrancy	Non Reentrant	
	Ctrlldx	Index of the controller within the context of the Ethernet Driver
	Trcvldx	Index of the transceiver on the MII (see [21] for details)
Parameters (in)	Regldx	Index of the transceiver register on the MII (see [21] for details)
	RegVal	Value to be written into the indexed register (see [21] for details)
Parameters (inout)	None	
Parameters (out)	None	
Return value	Std_Return- Type  E_OK: Service accepted E_NOT_OK: Service denied	
Description	Configures a transceiver register or triggers a function offered by the receiver	
Available via	Eth.h	

()

## [SWS\_Eth\_00059]{OBSOLETE} [

The function shall write the specified transceiver register through the MII of the indexed controller. ]()

## [SWS\_Eth\_00278]{DRAFT} [

The function shall write the specified transceiver register through the MII according to Clause 22 [20] for the indexed controller. I(SRS Eth 00148)

## [SWS\_Eth\_00273][

If Clause 45 registers need to be writen via this access mechanism, the API shall use the register 13 and 14 to access them as explicitly specified by the annex 22D [20]. J(SRS\_Eth\_00148)

# [SWS\_Eth\_00241][

The function shall call EthTrcv\_WriteMiiIndication when the MII access finished. (SRS\_Eth\_00148)

# [SWS\_Eth\_00060] [

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT. J()

# [SWS\_Eth\_00061] [

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH E INV\_CTRL\_IDX. I()

## [SWS\_Eth\_00062] [

The function shall be pre compile time configurable On/Off by the configuration parameter: EthCtrlEnableMii. |()

# [SWS\_Eth\_00063] [

Caveat: The function requires previous controller initialization (Eth\_Init). |()

### 8.3.8 Eth ReadMii

### [SWS Eth 00064][

[0110_Ettt_00004]]			
Service Name	Eth_ReadMii	Eth_ReadMii	
Syntax	<pre>Std_ReturnType Eth_ReadMii (    uint8 CtrlIdx,    uint8 TrcvIdx,    uint8 RegIdx,    uint16* RegValPtr )</pre>		
Service ID [hex]	0x06		
Sync/Async	Asynchronous		
Reentrancy	Non Reentrant		
	Ctrlldx Index of the controller within the context of the Ethernet Driver		
Parameters (in)	Trcvldx	Index of the transceiver on the MII (see [21] for details)	
	Regldx Index of the transceiver register on the MII (see [21] for details)		

Parameters (inout)	None	
Parameters (out)	RegValPtr	Filled with the register content of the indexed register (see [21] for details)
Return value	Std_Return- Type	E_OK: Service accepted E_NOT_OK: Service denied
Description	Reads a transceiver register	
Available via	Eth.h	

|()

# [SWS\_Eth\_00065]{OBSOLETE} [

The function shall read the specified transceiver register through the MII of the indexed controller. J()

## [SWS\_Eth\_00279]{DRAFT} [

The function shall read the specified transceiver register through the MII according to Clause 22 [20] for the indexed controller. J(SRS\_Eth\_00148)

## [SWS\_Eth\_00274][

If Clause 45 registers need to be read via this access mechanism, the API shall use the register 13 and 14 to access them as explicitly specified by the annex 22D [20]. |(SRS\_Eth\_00148)

### [SWS\_Eth\_00242][

The function shall call EthTrcv\_ReadMiiIndication when the MII access finished. ()

#### [SWS Eth 00066] [

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT. J()

### [SWS\_Eth\_00067] [

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX. |()

### [SWS Eth 00068] [

If development error detection is enabled: the function shall check the parameter RegValPtr for being valid. If the check fails, the function shall raise the development error ETH\_E\_PARAM\_POINTER. I()

## [SWS\_Eth\_00069] [

The function shall be pre compile time configurable On/Off by the configuration parameter: EthCtrlEnableMii. |()

[SWS\_Eth\_00070] [

Caveat: The function requires previous controller initialization (Eth\_Init). |()

### 8.3.9 Eth\_GetCounterValues

[SWS\_Eth\_00226][

Service Name	Eth_GetCounterVa	alues	
Syntax	<pre>Std_ReturnType Eth_GetCounterValues (   uint8 CtrlIdx,   Eth_CounterType* CounterPtr )</pre>		
Service ID [hex]	0x14		
Sync/Async	Synchronous	Synchronous	
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the controller within the context of the Ethernet Driver	
Parameters (inout)	None		
Parameters (out)	CounterPtr	counter values according to IETF RFC 1757, RFC 1643 and RFC 2233.	
Return value	Std_ReturnType	E_OK: success E_NOT_OK: counter values read failure	
Description	Reads a list with drop counter values of the corresponding controller. The meaning of these values is described at Eth_CounterType.		
Available via	Eth.h		

(SRS\_Eth\_00127)

## [SWS\_Eth\_00227] [

The function shall read a list of values from the indexed controller. (()

### [SWS Eth 00228][

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT otherwise (if DET is disabled) return E\_NOT\_OK. ]()

### [SWS Eth 00229][

If dev development elopment error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX otherwise (if DET is disabled) return E\_NOT\_OK. |()

[SWS\_Eth\_00230] [

If development error detection is enabled: the function shall check the parameter CounterPtr for being valid. If the check fails, the function shall raise the development error ETH\_E\_PARAM\_POINTER otherwise (if DET is disabled) return E\_NOT\_OK. J()

[SWS\_Eth\_00231] [

The function Eth\_GetCounterValues shall be pre compile time configurable On/Off by the configuration parameter: EthGetCounterValuesApi. |()

[SWS\_Eth\_00232] [

Caveat: The function requires previous controller initialization (Eth\_Init). J()

8.3.10 Eth\_GetRxStats

[SWS\_Eth\_00233][

Service Name	Eth_GetRxStats		
Syntax	<pre>Std_ReturnType Eth_GetRxStats (    uint8 CtrlIdx,    Eth_RxStatsType* RxStats )</pre>		
Service ID [hex]	0x15		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the controller within the context of the Ethernet Driver	
Parameters (inout)	None		
Parameters (out)	RxStats	RxStats List of values according to IETF RFC 2819 (Remote Network Monitoring Management Information Base)	
Return value	Std_Return- Type	E_OK: success E_NOT_OK: drop counter could not be obtained	
Description	Returns the following list according to IETF RFC2819, where the maximal possible value shall denote an invalid value, e.g. if this counter is not available: 1. etherStats DropEvents 2. etherStatsOctets 3. etherStatsPkts 4. etherStatsBroadcastPkts 5. etherStatsMulticastPkts 6. etherStatsCrcAlignErrors 7. etherStatsUndersizePkts 8. etherStatsOversizePkts 9. etherStatsFragments 10. etherStatsJabbers 11. etherStats Collisions 12. etherStatsPkts64Octets 13. etherStatsPkts65to127Octets 14. ether StatsPkts128to255Octets 15. etherStatsPkts256to511Octets 16. etherStats Pkts512to1023Octets 17. etherStatsPkts1024to1518Octets		
Available via	Eth.h		

J(SRS\_Eth\_00127)

## [SWS\_Eth\_00234] [

The function shall read a list of values from the indexed controller according to [22]. ()

## [SWS\_Eth\_00235] [

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT otherwise (if DET is disabled) return E\_NOT\_OK. ]()

## [SWS\_Eth\_00236][

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX otherwise (if DET is disabled) return E\_NOT\_OK. J()

[SWS\_Eth\_00237] [

If development error detection is enabled: the function shall check the parameter RxStats for being valid. If the check fails, the function shall raise the development error ETH\_E\_PARAM\_POINTER otherwise (if DET is disabled) return E\_NOT\_OK. I()

# [SWS\_Eth\_00238] [

The function Eth\_GetRxStats shall be pre compile time configurable On/Off by the configuration parameter: EthGetRxStatsApi. J()

### 8.3.11 Eth\_GetTxStats

[SWS\_Eth\_91005][

[O440_Etti_31	2M2_E[[[-a.ion2]]		
Service Name	Eth_GetTxStats		
Syntax	<pre>Std_ReturnType Eth_GetTxStats (   uint8 CtrlIdx,   Eth_TxStatsType* TxStats )</pre>		
Service ID [hex]	0x1c	0x1c	
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the controller within the context of the Ethernet Driver	
Parameters (inout)	None		
Parameters (out)	TxStats	List of values to read statistic values for transmission.	
Return value	Std_ReturnType	E_OK: success, E_NOTOK: Tx-statistics could not be obtained	
Description	Returns the list of Transmission Statistics out of IETF RFC1213 defined with Eth_Tx StatsType, where the maximal possible value shall denote an invalid value, e.g. this counter is not available.		
Available via	Eth.h		

(SRS\_Eth\_00127)

## [SWS\_Eth\_00248][

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT otherwise (if DET is disabled) return E\_NOT\_OK. (SRS\_BSW\_00101, SRS\_BSW\_00416)

## [SWS\_Eth\_00249][

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX otherwise (if DET is disabled) return E\_NOT\_OK. (SRS\_BSW\_00323, SRS\_BSW\_00369)

## [SWS\_Eth\_00250][

If development error detection is enabled: the function shall check the parameter TxStats for being valid. If the check fails, the function shall raise the development error ETH\_E\_PARAM\_POINTER otherwise (if DET is disabled) return E\_NOT\_OK. (SRS\_BSW\_00323, SRS\_BSW\_00369)

# [SWS\_Eth\_00251][

The function Eth\_GetTxStats shall be pre compile time configurable On/Off by the configuration parameter: EthGetTxStatsApi. (SRS\_Eth\_00053)

### 8.3.12 Eth GetTxErrorCounterValues

[SWS\_Eth\_91006][

Service Name	Eth_GetTxErrorCounterValues		
Syntax	<pre>Std_ReturnType Eth_GetTxErrorCounterValues (    uint8 CtrlIdx,    Eth_TxErrorCounterValuesType* TxErrorCounterValues )</pre>		
Service ID [hex]	0x1d		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	Ctrlldx	Index of the controller within the context of the Ethernet Driver	
Parameters (inout)	None		
Parameters (out)	TxErrorCounterValues	List of values to read statistic error counter values for transmission.	
Return value	Std_ReturnType	E_OK: success, E_NOTOK: Tx-statistics could not be obtained	
Description	Returns the list of Transmission Error Counters out of IETF RFC1213 and RFC1643 defined with Eth_TxErrorCounterValuesType, where the maximal possible value shall denote an invalid value, e.g. this counter is not available.		
Available via	Eth.h		

(SRS\_Eth\_00127)

### [SWS\_Eth\_00252][

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT otherwise (if DET is disabled) return E\_NOT\_OK. 

\_(SRS\_BSW\_00101, SRS\_BSW\_00416)

## [SWS\_Eth\_00253][

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX otherwise (if DET is disabled) return E\_NOT\_OK. (SRS\_BSW\_00323, SRS\_BSW\_00369)

### [SWS\_Eth\_00254][

If development error detection is enabled: the function shall check the parameter TxStats for being valid. If the check fails, the function shall raise the development error ETH\_E\_PARAM\_POINTER otherwise (if DET is disabled) return E\_NOT\_OK. (SRS\_BSW\_00323, SRS\_BSW\_00369)

## [SWS\_Eth\_00255][

The function Eth\_GetTxErrorCounterValues shall be pre compile time configurable On/Off by the configuration parameter: EthGetTxErrorCounterValuesApi. (SRS\_Eth\_00053)

### 8.3.13 Eth\_GetCurrentTime

# [SWS\_Eth\_00181][

[3443_Etti]_0t	tn_00181]			
Service Name	Eth_GetCurrentTime	Eth_GetCurrentTime		
Syntax	<pre>Std_ReturnType Eth_GetCurrentTime (   uint8 CtrlIdx,   Eth_TimeStampQualType* timeQualPtr,   Eth_TimeStampType* timeStampPtr )</pre>			
Service ID [hex]	0x16			
Sync/Async	Synchronous			
Reentrancy	Non Reentrant			
Parameters (in)	Ctrlldx	Index of the addresses ETH controller.		
Parameters (inout)	None			
Parameters	timeQualPtr	quality of HW time stamp, e.g. based on current drift		
(out)	timeStampPtr	current time stamp		
Return value	Std_ReturnType	E_OK: successful E_NOT_OK: failed		
Description	Returns a time value out of the HW registers according to the capability of the HW. Is the HW resolution is lower than the Eth_TimeStampType resolution resp. range, than an the remaining bits will be filled with 0. Important Note: Eth_GetCurrentTime may be called within an exclusive area.			
Available via	Eth.h			

**(**()

# [SWS\_Eth\_00182][

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT. J()

[SWS\_Eth\_00183] [

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX. |()

# [SWS\_Eth\_00184] [

If development error detection is enabled: the function shall check the parameter timeQualPtr and timeStampPtr for being valid. If the check fails, the function shall raise the development error ETH E PARAM POINTER. (()

## [SWS\_Eth\_00210][

The function shall be pre compile time configurable On/Off by the configuration parameter: EthGlobalTimeSupport. J()

# [SWS\_Eth\_00185] [

Caveat: The function requires previous controller initialization (Eth\_Init). J()

In case the Com-Stack is distributed across several partitions, the Ethernet stack could reside in a different partition than the StbM module calling Eth\_GetCurrentTime (via EthIf\_GetCurrentTime) API, means the call of Eth\_GetCurrentTime could happen in another partition.

## [SWS\_Eth\_00262] [

The Eth module shall apply appropriate mechanisms to allow calls of Eth\_GetCurrentTime API from other partitions than its main function, e.g. by providing an Eth satellite. ()

### 8.3.14 Eth EnableEgressTimeStamp

### [SWS Eth 00186][

Service Name	Eth_EnableEgressTimeStamp		
Syntax	<pre>void Eth_EnableEgressTimeStamp (   uint8 CtrlIdx,   Eth_BufIdxType BufIdx )</pre>		
Service ID [hex]	0x17		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters	Ctrlldx	Ctrlldx Index of the addresses ETH controller.	
(in)	Bufldx	Index of the message buffer, where Application expects egress time stamping	

Parameters (inout)	None
Parameters (out)	None
Return value	None
Description	Activates egress time stamping on a dedicated message object. Some HW does store once the egress time stamp marker and some HW needs it always before transmission. There will be no "disable" functionality, due to the fact, that the message type is always "time stamped" by network design.
Available via	Eth.h

]()

### [SWS Eth 00187][

# [SWS\_Eth\_00094] [

Caveat: The function requires previous buffer request (Eth\_ProvideTxBuffer). |()

### 8.3.19 Eth Receive

[SWS\_Eth\_00095][

Service Name	Eth_Receive				
Syntax	<pre>void Eth_Receive (   uint8 CtrlIdx,   uint8 FifoIdx,   Eth_RxStatusType* RxStatusPtr )</pre>				
Service ID [hex]	0xB				
Sync/Async	Synchronous				
Reentrancy	Reentrant for different FIFOs. Non Reentrant for the same FIFO.				
Dougnostous (in)	Ctrlldx	Index of the controller within the context of the Ethernet Driver			
Parameters (in)	Fifoldx	Fifoldx Specifies the related fifo			
Parameters (inout)	None				
Parameters (out)	RxStatus Indicates whether a frame has been received and if so, whether more frames are available for the related fifo.				
Return value	None				
Description	Receive a frame from the related fifo.				
Available via	Eth.h				

**(**()

### [SWS\_Eth\_00096] [

The function shall read the next frame from the receive buffers. The function passes the received frame to the Ethernet interface using the callback function EthIf\_RxIndication and indicates if there are more frames in the receive buffers. |()

### [SWS\_Eth\_00097] [

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT. |()

#### [SWS Eth 00098] [

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX. J()

### [SWS Eth 00132] [

If development error detection is enabled: the function shall check the controller mode for being active (ETH\_MODE\_ACTIVE). If the check fails, the function shall raise the development error ETH\_E\_INV\_MODE. J()

### [SWS\_Eth\_00153] [

When calling the callback function EthIf\_RxIndication broadcast frames shall be indicated to the Ethernet Interface (see [6]). ]()

[SWS\_Eth\_00099] [

Caveat: The function requires previous controller initialization (Eth\_Init). |()

### 8.3.20 Eth\_TxConfirmation

[SWS\_Eth\_00100][

Service Name	Eth_TxConfirmation	
Syntax	<pre>void Eth_TxConfirmation (   uint8 CtrlIdx )</pre>	
Service ID [hex]	0xC	
Sync/Async	Synchronous	
Reentrancy	Non Reentrant	
Parameters (in)	Ctrlldx Index of the controller within the context of the Ethernet Driver	
Parameters (inout)	None	
Parameters (out)	None	
Return value	void None	
Description	Triggers frame transmission confirmation	
Available via	Eth.h	

**(**()

# [SWS\_Eth\_00101] [

The function shall check all filled transmit buffers for successful transmission. The function issues transmit confirmation for each transmitted frame using the callback function EthIf\_TxConfirmation if requested by the previous call of Eth\_Transmit service. |()

### [SWS\_Eth\_00102] [

If transmission confirmation was enabled by a previous call to Eth\_Transmit function the function shall release the buffer resource. I()

# [SWS\_Eth\_00103] [

If development error detection is enabled: the function shall check that the service Eth\_Init was previously called. If the check fails, the function shall raise the development error ETH\_E\_UNINIT. (()

# [SWS\_Eth\_00104] [

If development error detection is enabled: the function shall check the parameter Ctrlldx for being valid. If the check fails, the function shall raise the development error ETH\_E\_INV\_CTRL\_IDX. |()

### [SWS\_Eth\_00134] [

If development error detection is enabled: the function shall check the controller mode for being active (ETH\_MODE\_ACTIVE). If the check fails, the function shall raise the development error ETH\_E\_INV\_MODE. I()

[SWS\_Eth\_00105] [

Caveat: The function requires previous initialization (Eth\_Init). |()

## 8.3.21 Eth\_GetVersionInfo

# [SWS\_Eth\_00106][

Service Name	Eth_GetVersionInfo	
Syntax	<pre>void Eth_GetVersionInfo (    Std_VersionInfoType* VersionInfoPtr )</pre>	
Service ID [hex]	0xD	
Sync/Async	Synchronous	
Reentrancy	Reentrant	
Parameters (in)	None	
Parameters (inout)	None	
Parameters (out)	VersionInfoPtr Version information of this module	
Return value	void None	
Description	Returns the version information of this module	
Available via	Eth.h	

]()

## [SWS Eth 00136] [

If development error detection is enabled: the function shall check the parameter VersionInfoPtr for being valid. If the check fails, the function shall raise the development error ETH\_E\_PARAM\_POINTER. |()

# 8.4 Callback notifications

The Ethernet Driver does not provide any callback functions.

## 8.5 Scheduled functions

## 8.5.1 Eth\_MainFunction

## [SWS\_Eth\_00171][

Service Name	Eth_MainFunction
Syntax	<pre>void Eth_MainFunction (   void )</pre>
Service ID [hex]	0x20
Description	The function checks for controller errors and lost frames. Used for polling state changes. Calls EthIf_CtrlModeIndication when the controller mode changed.
Available via	SchM_Eth.h

**(**()

## [SWS\_Eth\_00169] [

The function shall check for lost frames. If the check fails, the function shall raise the extended production error event ETH\_E\_RX\_FRAMES\_LOST. |()

### [SWS\_Eth\_00172] [

The function shall check for controller errors (e.g. CRC errors). If the check fails, the function shall raise the extended production error event as defined in section 7.2.2 Extended Production Errors (e.g. ETH\_E\_CRC). J()

# [SWS\_Eth\_00240] [

Used for polling state changes. Calls Ethlf\_CtrlModeIndication when the controller mode changed. |()

# 8.6 Expected Interfaces

This chapter lists all interfaces required from other modules.

# 8.6.1 Mandatory Interfaces

This chapter defines all interfaces required to fulfill the core functionality of the module.

### [SWS\_Eth\_00119][

API Function	Header File	Description
Dem_Set- EventStatus	Dem.h	Called by SW-Cs or BSW modules to report monitor status information to the Dem. BSW modules calling Dem_SetEventStatus can safely ignore the return value. This API will be available only if ({Dem/DemConfigSet/DemEventParameter/DemEventReporting Type} == STANDARD_REPORTING)
Ethlf_Ctrl- Mode- Indication	Ethlf.h	Called asynchronously when mode has been read out. Triggered by previous Eth_SetControllerMode call. Can directly be called within the trigger functions.
EthIf_Rx- Indication	Ethlf.h	Handles a received frame received by the indexed controller
EthIf_Tx- Confirmation	Ethlf.h	Confirms frame transmission by the indexed controller
SchM_Enter Eth	Sch M_ <mip>.h</mip>	Invokes the SchM_Enter function to enter a module local exclusive area.
SchM_Exit Eth	Sch M_ <mip>.h</mip>	Invokes the SchM_Exit function to exit an exclusive area.

]()

## 8.6.2 Optional Interfaces

This chapter defines all interfaces required to fulfill an optional functionality of the module.

[SWS\_Eth\_00120][

API Function	Header File	Description
Det_Report- Error	Det.h	Service to report development errors.
EthSwt_EthRx- Finished- Indication	EthSwt_ Eth.h	Indication for a finished receive process for a specific Ethernet frame, which results in providing the management information retrieved during EthSwt_EthRxProcessFrame().
EthSwt_EthRx- ProcessFrame	EthSwt_ Eth.h	Function inspects the Ethernet frame passed by the data pointer for management information and stores it for later use in EthSwt_EthRx FinishedIndication().
EthSwt_EthTx- AdaptBuffer- Length	EthSwt_ Eth.h	Modifies the buffer length to be able to insert management information.
EthSwt_EthTx- Finished- Indication	EthSwt_ Eth.h	Indication for a finished transmit process for a specific Ethernet frame.
EthSwt_EthTx- PrepareFrame	EthSwt_ Eth.h	Prepares the Ethernet frame for common Ethernet communication (frame shall be handled by switch according to the common address resolution behavior) and stores the information for processing of Eth Swt_EthTxFinishedIndication().
EthSwt_EthTx- ProcessFrame	EthSwt_ Eth.h	Function inserts management information into the Ethernet frame.

]()

## 8.6.3 Configurable interfaces

The Ethernet Driver does not use configurable interfaces.

Terms and definitions:

Reentrant: interface is expected to be reentrant

Don't care: reentrancy of interface not relevant for this module (in general it is in this

case not reentrant).

# 9 Sequence diagrams

The usage of the Ethernet Driver is depicted in the sequence diagrams of the Ethernet Interface.

## 10 Configuration specification

In general, this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter 10.1 describes fundamentals. It also specifies a template (table) you shall use for the parameter specification. We intend to leave Chapter 10.1 in the specification to guarantee comprehension.

Chapter 10.2 specifies the structure (containers) and the parameters of the module Ethernet Driver.

Chapter 10.3 specifies published information of the module Ethernet Driver.

.

## 10.1 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters describe Chapters 7 and Chapter 8.

## [SWS\_Eth\_00257] [

The Ethernet Driver module shall reject configurations with partition mappings which are not supported by the implementation. |()

### [SWS\_Eth\_00258] [

If the driver manages several Ethernet controllers and if a subset of these controllers share peripheral resources or are somehow coupled (E.g. Communication control can only be done globally for all controllers), Ethernet driver shall emulate independent controllers to the upper layers. The coordination (E.g. Communication control) has to be done by the upper layer modules. ()

#### 10.1.1 Eth

SWS Item	ECUC_Eth_00038:
Module Name	Eth
Module Description	Configuration of the Eth (Ethernet Driver) module.
Post-Build Variant Support	true
Supported Config Variants	VARIANT-LINK-TIME, VARIANT-POST-BUILD, VARIANT-PRE-COMPILE

Included Containers			
Container Name	Multiplicity	Scope / Dependency	
EthConfigSet		This container contains the configuration parameters and sub containers of the AUTOSAR Eth module.

Included Containers		
Container Name	Multiplicity	Scope / Dependency
EthCtrlConfigEgress	1	Configuration of one Ethernet controler egress behavior.
EthCtrlConfigIngress	1	Configuration of one Ethernet controler ingress behavior.
EthDemEventParameterRefs	01	Container for the references to DemEventParameter elements which shall be invoked using the API Dem_SetEventStatus in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic value. The standardized errors are provided in this container and can be extended by vendor-specific error references.

## [SWS\_Eth\_00260] [

The ECUC partitions referenced by EthCtrlEcucPartitionRef shall be a subset of the ECUC partitions referenced by EthEcucPartitionRef. ()

### [SWS\_Eth\_00261] [

EthCtrlConfig, EthTrcvConfig and EthSwtConfig (if existent in configuration) of one communication channel shall all reference the same ECUC partition ().

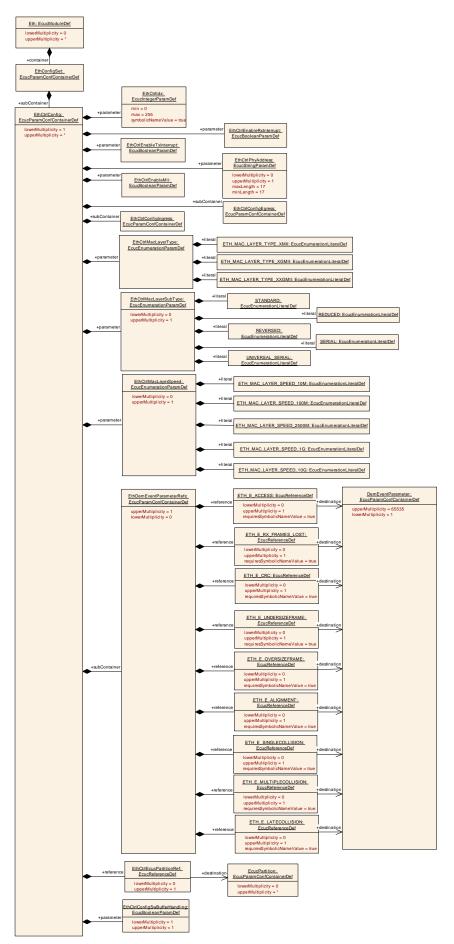

[SWS\_Eth\_CONSTR\_00001][

If EthCtrlEcucPartitionRef references one or more ECUC partitions, EthCtrlEcucPartitionRef shall have a multiplicity of one and reference one of these ECUC partitions as well. ()

	Post-build time			
Scope / Dependency	scope: local			

SWS Item	ECUC_Eth_00004:			
Name	EthVersionInfoApi			
Parent Container	EthGeneral			
Description	Enables / Disables version ir	Enables / Disables version info API		
Multiplicity	1	1		
Туре	EcucBooleanParamDef			
Default value	false			
Post-Build Variant Value	false	false		
Value Configuration Class	Pre-compile time	Χ	All Variants	
	Link time			
	Post-build time			
Scope / Dependency	scope: local			

SWS Item	ECUC_Eth_00064:		
Name	EthEcucPartitionRef		
Parent Container	EthGeneral		
-	Maps the Ethernet driver to zero or multiple ECUC partitions to make the modules API available in this partition. The Ethernet driver will operate as an independent instance in each of the partitions.		
Multiplicity	0*		
Туре	Reference to [ EcucPartition ]		
Post-Build Variant Multiplicity	true		
Post-Build Variant Value	true		
Multiplicity Configuration	Pre-compile time	Χ	All Variants
Class	Link time		

	Post-build time		
Value Configuration Class	Pre-compile time	Χ	All Variants
	Link time		
	Post-build time	I	
Scope / Dependency	scope: ECU		

Included Containers		
Container Name	Multiplicity	Scope / Dependency
EthCtrlOffloading	1	Configuration of hardware offloading features.

# [SWS\_Eth\_00259] [

The module will operate as an independent instance in each of the partitions, means the called API will only target the partition it is called in.]()

# 10.1.12 EthCtrlOffloading

SWS Item	ECUC_Eth_00030:
Container Name	EthCtrlOffloading
Parent Container	EthGeneral
Description	Configuration of hardware offloading features.
Configuration Parameters	

SWS Item	ECUC_Eth_00032:		
Name	EthCtrlEnableOffloadChecksumICMP		
Parent Container	EthCtrlOffloading		
Description	Enables / Disables hardware offloading for ICMP checksums.		
Multiplicity	1		
Туре	EcucBooleanParamDef		
Default value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	Χ	All Variants
	Link time		
	Post-build time		
Scope / Dependency	scope: local		

SWS Item	ECUC_Eth_00031:		
Name	EthCtrlEnableOffloadChecksumIPv4		
Parent Container	EthCtrlOffloading		
Description	Enables / Disables hardware offloading for IPv4 checksums.		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	Χ	All Variants
	Link time		
	Post-build time		
Scope / Dependency	scope: local		•

SWS Item	ECUC_Eth_00033:		
Name	EthCtrlEnableOffloadChecksumTCP		
Parent Container	EthCtrlOffloading		
Description	Enables / Disables hardware offloading for TCP checksums.		
Multiplicity	1		
Туре	EcucBooleanParamDef		
Default value			
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	Χ	All Variants
	Link time	ł	
	Post-build time	1	
Scope / Dependency	scope: local		

SWS Item	ECUC_Eth_00034:
Name	EthCtrlEnableOffloadChecksumUDP
Parent Container	EthCtrlOffloading
Description	Enables / Disables hardware offloading for UDP checksums.

# Specification of Ethernet Driver AUTOSAR CP R20-11

Multiplicity	1
